### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Ragland et al (US6104004).

Ragland et al discloses a cooking apparatus comprising a cabinet (1) opened at a top surface to provide an opening/cavity over which food to be cooked is laid (Figures 1, 3), a grill (3, 33) seated in the opening to support food, a heating unit (4, 34) in the cooking cabinet, a plurality of reflecting members (8, 9, 16, 17, 31, 32) at predetermined positions around a rear surface of the heating unit (8, 16, 31), the reflecting members spaced apart from each other by a gap to provide an air layer between the reflecting members (column 6, lines 2-5, 10-18, 33-43, 54-5862-64; column 4, lines 10-21, 36-57) wherein the reflecting members has a projection (Figure 2b, 12) and the thermal heat generated is repeatedly reflected (Figure 1), the reflecting members surround the upper, lower, and rear portions of the heating unit (Figures 1, 3), a removable tray (19, 40), a control switch (6), and first, second, and third reflecting members (column 3, lines 58-61).

Application/Control Number: 10/713,159

Art Unit: 3742

### Claim Rejections - 35 USC § 103

Page 3

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 4-5, 7-8, 15, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ragland et al in view of GB-2286111 and Huck (US3154004).

Ragland et al discloses all of the recited subject matter except a plurality of heating units set in both sides of the cavity opposite to each other and are inclined to tilt toward the opening (Figures 1, 3), and a timer switch to control operation. GB-2286111 discloses a plurality of heating units set in both sides of the cavity opposite to each other and are inclined to tilt toward the opening (Figures 1, 3) a timer switch (28) to control operation. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have replaced the heating unit of Ragland et al with the inclined heating unit of GB-2286111which are set in both sides of the cavity, and to have included the timer of Huck in the Ragland et al apparatus because, inclined heating units on both sides of the cavity allow the heat to be directed on the food items more efficiently, and a timer allows the apparatus to be controlled more efficiently.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ragland et al in view of GB-2286111 and Huck as applied to claim 4 above, and further in view of KR-200216089.

Ragland et al in view of GB-2286111 and Huck discloses all of the recited subject matter except a heating unit which includes a ceramic member with a heating element. KR-200216089

Art Unit: 3742

discloses a heating unit which includes a ceramic member with a heating element (abstract). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a heating unit which includes a ceramic member with a heating element as taught by KR-200216089 in the apparatus of Ragland et al along with the side heating units of GB-2286111 and the timer switch of Huck because, a heating unit which includes a ceramic member with a heating element allows the food to be heated more uniformly.

Page 4

6. Claims 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ragland et al in view of GB-2286111 and Huck as applied to claim 4 above, and further in view of Hennick (US5189945).

Ragland et al in view of GB-2286111 and Huck discloses all of the recited subject matter except a grill unit comprising a plurality of water tanks on both sides and a plurality of grill pipes between the tanks and having hollow structures so that water flows through pipes from the tank wherein the pipes are continuously cooled. Hennick discloses a grill unit comprising a plurality of water tanks on both sides and a plurality of grill pipes between the tanks and having hollow structures so that water flows through pipes from the tank wherein the pipes are continuously cooled (abstract, Figures 1-3). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the grill unit of Hennick in the apparatus of Ragland et al along with the side heaters of GB-2286111, and timer switch of Huck because, a grill unit comprising a plurality of water tanks on both sides and a plurality of grill pipes between the tanks and having hollow structures so that water flows through pipes from the tank wherein the pipes are continuously cooled prevents the food from sticking to the grill while it is being cooked.

Art Unit: 3742

### Allowable Subject Matter

- 7. Claims 11-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 8. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record neither discloses nor suggests a tray which has a hump along a central axis thereof and reflecting plates on both sides of the hump.

## Response to Arguments

9. Applicant's arguments filed 3/18/05 have been fully considered but they are not persuasive. Applicant argues that Ragland's reflective inserts are not provided at predetermined positions around a rear surface of the heating element and that there is not an air layer therebetween. Examiner directs Applicant to Figure 1 of Ragland where there are three reflectors (8 on right, 8 on left, 16) located below a rear surface of heating element (4). In addition, there is an air layer between the reflectors since reflector 16 is placed slightly above reflectors 8.

#### Conclusion

10. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 3742

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawntina T. Fuqua whose telephone number is (571) 272-4779. The examiner can normally be reached on Monday-Friday 8-4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on (571) 272-4777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
